

Feedback Expert Review PCMasterRace

- Introduction was okay, a bit vague on what methods you used to test the usability.
- Persona's were well thought-out.
- Scenarios were well thought-out and representative, but described too briefly.
- Findings were excellent. Problems were evident and described with clarity. Integration of persona profiles and usability problems was excellent.
- Conclusion was somewhat lacking. The goal of this review was not whether or not *you* would want to use the app on your phones. Try to objectively summarise the found problems.
- Style was good. Mostly neat separation of objective and subjective style, save for the conclusion.
